

Units of measure - Mass

Facts

You can convert metric units of mass using the diagram below

Mass conversions use 1000's, and usually create fairly large results.

$$1.6 \text{ tonne} = ? \text{ kg} \quad \text{Need to } \times 1000 \quad 1.6 \times 1000 = 1600 \text{ kg} \quad \checkmark$$
